

PUBLIC SAFETY POWER SHUTOFF

All Californians should be prepared for potential power outages.

When will a Public Safety Power Shutoff occur?

Fire is, and always has been, a natural part of living in our beautiful state. Unlike most natural disasters, wildfires are often started by people. During dry weather and droughts, normally green vegetation can convert into flammable fuel; strong winds spread fire quickly; and warm temperatures encourage combustion. With these ingredients, the only thing missing is a spark—in the form of lightning, a downed power line, a spark from a lawn mower, a burning campfire or cigarette—to wreak havoc.

Every situation is unique. Your energy company makes the decision to turn off power by monitoring local fire danger conditions across California and taking into consideration a combination of weather and environmental factors.

If extreme fire danger conditions threaten a portion of the electric system serving your community, it may be necessary for PG&E to turn off electricity in the interest of public safety. This is called Public Safety Power Shutoff.

Sign up for updates related to Public Safety Power Shutoffs here, and learn more about if where you live might experience a shutoff:

If a Public Safety Power Shutoff is needed due to extreme weather conditions, you can expect:

EARLY WARNING NOTIFICATION – Your energy company will aim to send customer alerts before shutting off power.

ONGOING UPDATES – Your energy company will provide ongoing updates through social media, local news outlets and their website.

SAFETY INSPECTIONS – After extreme weather has passed, your energy company will inspect the lines in affected areas before power is safely restored.

POWER RESTORATION – Power outages could last multiple days depending on the severity of the weather and other factors. It is important that you and your family have an emergency preparedness plan in place.

PUBLIC SAFETY POWER SHUTOFF MAY OCCUR DUE TO THE FOLLOWING FACTORS:

HIGH WINDS AND HIGH WIND GUSTS

LOW HUMIDITY LEVELS

DRY VEGETATION that could serve as fuel for a wildfire

FIRE THREAT to electric infrastructure

REAL-TIME OBSERVATIONS by on-the-ground field experts

RED FLAG WARNING declared by the National Weather Service

How long will it take before power is restored?

Power will remain out for as long as extreme and dangerous weather conditions pose a potential fire risk. After a Public Safety Power Shutoff event, your energy company will inspect and repair power lines and equipment so that power can be safely restored.

Depending on the severity of the weather and other factors, power outages could last several hours or multiple days – so it's important you and your family have an emergency plan in place.

What if I'm dependent on electricity for a medical device?

During a Public Safety Power Shutoff, ALL customers serviced by an affected power line will have their power shut off. If you rely on electric or battery-dependent medical technologies such as breathing machines, a power wheelchair or scooter, and home oxygen or dialysis, it is critical that you have a plan in place for an extended power outage.

YOUR PLAN SHOULD INCLUDE:

Keeping emergency phone numbers handy

Identifying a backup location where you can go

Making sure your energy company is aware of your medical device

Considering a safe backup power source, such as a generator or uninterruptible power supply

Establishing multiple people you can contact for help who know how to operate your equipment and backup systems

Residential customers who have special energy needs due to qualifying medical conditions should sign up for the Medical Baseline Program through their energy company. In addition to the lower rate on your monthly energy bill, this program can help by providing extra notifications in advance of a Public Safety Power Shutoff.
